

PAPERS ON ENGINEERING SUBJECTS.

No. 16. December, 1937.

CONTENTS.

	PAGE
1. Coal <i>versus</i> Oil for the Navy	3
2. Naval Water-tube Boilers	17
3. Developments in Boiler Design	51
4. Chemistry in Naval Engineering	71
5. The Estimation of Mechanical Losses of Compression Ignition Engines by means of a Combustion Factor Diagram	89
6. The Relative Output of Internal Combustion Engines	95
7. A Brief Outline of Welding with particular reference to the Metallic Arc Process	101
8. Scientific Development in Modern Welding Methods	119
9. Stainless and Heat Resisting Steels.. .. .	123
10. Nitriding or Surface-Hardening of Steel by the Nitrogen Process..	131
11. Notes :—	
(a) Emergency Governors of Turbine Driven Auxiliary Machinery	139
(b) The Fabrication of a Motor Boat Engine Cylinder Block ..	142
(c) The Effect of Excess Air on Boiler Efficiency	147
(d) Fitting Replace Wheel to a Brown Curtis Turbine.. .. .	148
12. Recent Developments in the Design of Machinery for Destroyers	151
